SAT-STYLE PRACTICE SERIES

SAT
Practice Test

Digital format, printed. Sit it in one go, on the clock, then mark it and learn from every miss.

4	120	164
MODULES	QUESTIONS	MINUTES

Before you start

- [ ] A sharp pencil, an eraser, and a watch or timer
- [ ] A calculator for the two Math modules
- [ ] A quiet table and about 184 minutes with no interruptions
- [ ] Circle your answers in this booklet, or use the answer sheet at the back

MODULE	QUESTIONS	TIME
Reading and Writing, Module 1	33	39 min
Reading and Writing, Module 2 (harder)	33	39 min
Math, Module 1 (calculator permitted)	27	43 min
Math, Module 2 (harder)	27	43 min

Every question in this test is original and written by Testiddle. It follows the common patterns of the real exam but is not affiliated with, or endorsed by, any exam provider.

Test begins on the next page.

Start your timer now.

1 Reading and Writing

33 QUESTIONS 39 MINUTES

DIRECTIONS

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer. Circle your answer in the booklet.

PACE YOURSELF

You have **39 minutes** for **33 questions**, which is about **71 seconds** a question. Answer what you can quickly, circle the ones that need more time, and come back to them before time is called. There is no penalty for a wrong answer, so never leave a question blank.

WHAT YOU WILL SEE IN THIS MODULE

- Words in context
- Text structure and purpose
- Cross-text connections
- Central ideas and details
- Command of evidence: quantitative
- Command of evidence: textual
- Inferences
- Form, structure, and sense
- Boundaries
- Transitions
- Rhetorical synthesis

Questions 1 to 4 of 33

1 WORDS IN CONTEXT

The bakery's owner insists that the secret to its bread is not a rare ingredient but _____ : she lets every loaf rise for a full day, however busy the shop becomes.

Which choice completes the text with the most logical and precise word or phrase?

(A) haste
(B) secrecy
(C) patience
(D) luck

2 WORDS IN CONTEXT

After months of negotiation, the two companies reached a _____ : each gave up part of what it had wanted, and neither was entirely satisfied.

Which choice completes the text with the most logical and precise word or phrase?

(A) rivalry
(B) monopoly
(C) stalemate
(D) compromise

3 WORDS IN CONTEXT

The author's earlier novels were known for elaborate, _____ sentences, so readers were surprised that her latest book is written in short, plain lines.

Which choice completes the text with the most logical and precise word or phrase?

(A) terse
(B) ornate
(C) hesitant
(D) plain

4 WORDS IN CONTEXT

Because the island has no natural predators, its native birds have grown _____ and show little fear of humans who approach them.

Which choice completes the text with the most logical and precise word or phrase?

(A) unwary
(B) aggressive
(C) migratory
(D) ravenous

5

WORDS IN CONTEXT

The engineer's proposal was dismissed as _____, but when a smaller version of the project succeeded, the board began to take her ideas seriously.

Which choice completes the text with the most logical and precise word or phrase?

A) impractical

B) profitable

C) dazzling

D) routine

6

TEXT STRUCTURE AND PURPOSE

The following text is adapted from an original science article.

> Lichens, the crusty growths that cover rocks and tree bark, are not single organisms. Each is a partnership between a fungus and an alga or bacterium. The fungus provides structure and shelter, while its partner uses sunlight to make sugars that feed them both. Together, they can survive on bare rock where neither could live alone.

Which choice best describes the function of the underlined sentence in the text as a whole?

A) It disputes the claim that lichens are single organisms.

B) It explains how the two partners in a lichen contribute to the arrangement.

C) It compares lichens with other organisms that grow on rocks.

D) It describes how researchers first identified the partners in a lichen.

7

TEXT STRUCTURE AND PURPOSE

The following text is from an original short story. Ravi is waiting to hear the results of an audition.

> Ravi had rehearsed his smile for the corridor, but when the door opened, the casting director only glanced at her clipboard and said the panel would be in touch. He walked to the lift counting the tiles under his feet: forty-one, forty-two. Outside, the afternoon traffic made an indifferent noise. He realised he was still holding the sheet music, rolled so tightly in his hand that it had begun to tear.

Which choice best states the main purpose of the text?

A) To describe the casting director's reasons for rejecting Ravi

B) To show that Ravi is relieved that the audition is over

C) To explain why Ravi chose to become a musician

D) To convey Ravi's disappointment and tension through his actions after the audition

8 TEXT STRUCTURE AND PURPOSE

The following text is from an original poem.

> The orchard in October leans
> with all it bore and cannot hold.
> The pickers have gone down. The beans
> are dry. The mornings come in cold.
> And yet the ladder in the tree
> still waits, as if it half believed
> that something more would come to be
> if only it stayed unretrieved.

Which choice best describes the overall structure of the text?

(A) The speaker lists tasks to be done, then explains why they are urgent.

(B) The speaker remembers a childhood, then compares it with adulthood.

(C) The speaker describes the end of a season, then gives a human quality to an object that remains.

(D) The speaker argues against a view, then accepts it.

9 CROSS-TEXT CONNECTIONS

TEXT 1

Some educators argue that homework deepens learning because it requires students to practise independently what they have been taught. They point to studies in which students who completed regular assignments scored higher on end-of-year tests.

TEXT 2

A teacher who reviewed those studies notes that the students who did more homework were often also the ones with more support at home. She argues that, without accounting for this difference, the studies cannot show that homework itself raised scores.

Based on the texts, how would the teacher in Text 2 most likely respond to the educators' argument in Text 1?

(A) By saying that the studies do not rule out another explanation for the higher scores

(B) By arguing that students who do homework perform worse on tests

(C) By agreeing that homework is the only cause of the higher scores

(D) By claiming that students should be given more homework

10 CENTRAL IDEAS AND DETAILS

The following text is adapted from an original essay about sleep.

> We often treat sleep as downtime, a pause between periods of real activity. But researchers who monitor the sleeping brain find that it is anything but idle: during certain stages, patterns of neural activity from the day are replayed, as though the brain were rehearsing what it has learned. Students who slept after studying a list of words recalled more of them the next day than students who stayed awake for the same period.

Which choice best states the main idea of the text?

(A) Sleep is less important to learning than studying.

(B) The brain is entirely inactive while a person sleeps.

(C) Sleep is an active process that helps the brain consolidate what has been learned.

(D) Students should study the same list of words every day.

11 CENTRAL IDEAS AND DETAILS

The following text is from an original essay about a village's history.

> The village of Hallow End has been described by visitors as unchanging, a place where nothing has happened for centuries. The parish records tell another story: the church burned down twice, the river changed course in 1740, leaving the mill stranded, and the population fell by half during a single decade of emigration. What looks like stillness, the essayist suggests, is the surface left by repeated recoveries.

Which choice best states the main idea of the text?

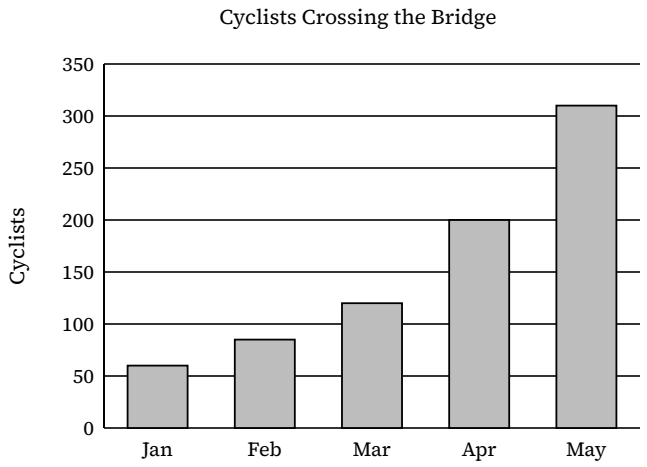

(A) The village of Hallow End has lost most of its population and may soon disappear.

(B) A village that seems unchanged has in fact been shaped by repeated upheaval and recovery.

(C) Visitors to Hallow End rarely read the parish records.

(D) The river's changed course made the mill more successful.

12 COMMAND OF EVIDENCE: QUANTITATIVE

A city planner counted the number of cyclists who crossed a bridge on the first Monday of each month from January to May. She wants to emphasise how quickly numbers rose in spring.

Which choice most effectively uses data from the graph to complete the text?

(A) the number of cyclists crossing the bridge fell from 310 in March to 120 in May.

(B) the number of cyclists crossing the bridge was 310 in May, the highest of the five months, and 60 in January.

(C) the number of cyclists crossing the bridge rose from 60 in January to 120 in March.

(D) the number of cyclists crossing the bridge rose from 120 in March to 310 in May, more than doubling in two months.

13 COMMAND OF EVIDENCE: QUANTITATIVE

Share of Drink Sales by Type

Weather	Iced drinks	Hot drinks
Warm days	62%	38%
Cool days	18%	82%

A café owner recorded the drinks sold in a week and wants to argue that iced drinks are popular in warm weather.

Which choice most effectively uses data from the table to support the owner's claim?

(A) On the cool days, hot drinks made up 82 percent of sales, compared with 38 percent on the warm days.

(B) Iced drinks made up 62 percent of sales on the warm days, and hot drinks made up 38 percent.

(C) On the warm days, iced drinks made up 62 percent of sales, compared with 18 percent on the cool days.

(D) Hot drinks made up a greater share of sales than iced drinks over the whole week.

14 COMMAND OF EVIDENCE: TEXTUAL

The following text is adapted from an original essay about a naturalist.

> The naturalist Cornelia Voss kept careful records of the birds in her garden for forty years. In the 1970s she began to notice that the spring arrival of swallows, which had once come in the first week of April, was creeping earlier. By the 1990s they were arriving in the middle of March.

A student claims that Voss's records documented a change in the timing of swallows' arrival. Which quotation from the text best supports the student's claim?

A "By the 1990s they were arriving in the middle of March."

B "The naturalist Cornelia Voss kept careful records of the birds in her garden for forty years."

C "swallows, which had once come in the first week of April"

D "In the 1970s she began to notice"

15 COMMAND OF EVIDENCE: TEXTUAL

A researcher claims that practising a musical instrument improves a child's attention in other tasks.

> A study followed two groups of eight-year-olds for a year. One group took weekly piano lessons, and the other took weekly art lessons. At the end of the year, the children who had played piano scored higher on a test of sustained attention than the art group.

Which finding from the text most directly supports the researcher's claim?

A Both groups were made up of eight-year-olds.

B The piano group scored higher than the art group on a test of sustained attention.

C The children had weekly lessons throughout the year.

D The art group was taught by an experienced teacher.

16 COMMAND OF EVIDENCE: TEXTUAL

The following text is adapted from an original essay about a bridge.

> Engineers praised the footbridge for its slenderness. A reviewer, however, thought its elegance came at a price: in strong winds the deck swayed enough to unsettle walkers, and the city later installed dampers to steady it.

Which choice best states a drawback of the bridge described in the text?

(A) Its slenderness made it unpopular with engineers.

(B) The city refused to repair it after storms.

(C) It was too narrow for walkers to use.

(D) In strong winds it moved enough to be uncomfortable for people crossing it.

17 INFERENCES

The following text is adapted from an original science article.

> Coral reefs host a quarter of marine species yet cover less than one percent of the ocean floor. When a reef bleaches and dies, fish that depend on it for food and shelter disappear within a few years. This suggests that protecting a small area of reef

Which choice most logically completes the text?

(A) is unlikely to affect any fish.

(B) would harm species that live in deep water.

(C) may help sustain a large number of species.

(D) is useful only if it covers a large area.

18 INFERENCES

The following text is from an original essay about urban noise.

> Researchers measured the stress hormones of residents on two streets with similar populations, one near an airport and one far from it. The residents of the street near the airport showed consistently higher levels. The researchers cautioned that other differences between the two streets might also play a role. Still, the results suggest that

Which choice most logically completes the text?

(A) aircraft noise is the only cause of stress in cities.

(B) aircraft noise may be one factor affecting the stress of those who live nearby.

(C) people far from airports experience no stress at all.

(D) stress hormones are unrelated to the environment.

19 INFERENCES

The following text is adapted from an original essay about a language.

> Linguists studying a language spoken by a few hundred people in the Andes noticed that speakers always state how they know something: a suffix on each verb shows whether the speaker saw an event, heard it from someone, or inferred it. A speaker who gave a false report with the wrong suffix would be considered to have lied. It seems that in this community, accuracy about the source of information is

Which choice most logically completes the text?

(A) unimportant to those who speak the language.

(B) a skill that only linguists possess.

(C) the result of recent contact with other languages.

(D) a matter of social importance, built into everyday speech.

20 FORM, STRUCTURE, AND SENSE

The garden's roses, which were planted in 1890, _____ every June.

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) bloom

(B) blooms

(C) blooming

(D) has bloomed

21 BOUNDARIES

The team's captain, _____ played in three national finals, was asked to lead the training session.

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) who had

(B) whom had

(C) which had

(D) who

22 FORM, STRUCTURE, AND SENSE

The report concluded that the new drug was effective, _____ several patients experienced side effects.

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) therefore

(B) because

(C) although

(D) unless

23 FORM, STRUCTURE, AND SENSE

Ellis wanted to learn to dive, _____ the wreck near his home.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) swimming, and to explore
B) to swim, and to explore
C) to swim, and explore
D) to swim and exploring

24 BOUNDARIES

The sanctuary cares for injured animals, and _____ volunteers feed them twice daily.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) it's
B) their's
C) it is
D) its

25 BOUNDARIES

The report, along with its appendices, _____ available on the council's website.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) are
B) were
C) have been
D) is

26 FORM, STRUCTURE, AND SENSE

She was the first student in the school's history _____ a national science prize.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) to win
B) winning
C) who winning
D) she won

27 FORM, STRUCTURE, AND SENSE

The children ran to the window, _____ the first snow of winter.

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) eager seeing

(B) eager to see

(C) they were eager to see

(D) and eager to saw

28 TRANSITIONS

The new phone's battery is smaller than its predecessor's. _____ the device runs for longer between charges, thanks to a more efficient processor.

Which choice completes the text with the most logical transition?

(A) For instance,

(B) As a result,

(C) Even so,

(D) Likewise,

29 TRANSITIONS

Honey is prized as a sweetener. _____ it has also long been used as a wound dressing, because it draws moisture from the surrounding tissue and slows the growth of bacteria.

Which choice completes the text with the most logical transition?

(A) For example,

(B) Thus,

(C) Overall,

(D) However,

30 TRANSITIONS

Surveys show that most students prefer to study at home. _____ a significant minority say they concentrate better in a library.

Which choice completes the text with the most logical transition?

(A) Therefore,

(B) Similarly,

(C) Still,

(D) Specifically,

31 RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- Dr. Yara Nasser is a marine biologist.
- She studies how sea turtles navigate.
- She has tracked more than 200 turtles with satellite tags.
- Her research was published in 2021.
- She works at a university in Lisbon.

The student wants to introduce a person to an audience that is unfamiliar with her work.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Yara Nasser works at a university in Lisbon.

(B) Marine biologist Yara Nasser, who studies how sea turtles navigate, has tracked more than 200 of them with satellite tags.

(C) Dr. Yara Nasser published her research in 2021.

(D) Sea turtles have been tracked by satellite tags.

32 RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- A sextant is a navigational instrument.
- It measures the angle between the horizon and a celestial body.
- Sailors use that angle to calculate their latitude.
- The sextant was invented in the 1700s.
- It replaced the older octant.

The student wants to explain the purpose of a tool.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) A sextant measures the angle between the horizon and a celestial body, which sailors use to calculate their latitude.

(B) The sextant, invented in the 1700s, replaced the older octant.

(C) A sextant is a navigational instrument invented in the 1700s.

(D) Sailors have used many instruments to find their position.

33

RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- Reykjavik has a population of about 140,000.
- Valletta has a population of about 6,000.
- Reykjavik is the capital of Iceland.
- Valletta is the capital of Malta.
- Both are coastal capitals.

The student wants to make a comparison between two cities.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Reykjavik is the capital of Iceland, and Valletta is the capital of Malta.

(B) Reykjavik has a population of about 140,000.

(C) Valletta, with a population of about 6,000, is a coastal city.

(D) Both are coastal capitals, but Reykjavik has about 140,000 residents, while Valletta has only about 6,000.

STOP If you finish before time is called, you may check your work on this module only. Do not turn to any other module in the test.

1 Reading and Writing Module 2

33 QUESTIONS 39 MINUTES

DIRECTIONS

The questions in this section address a number of important reading and writing skills. Each question includes one or more passages, which may include a table or graph. Read each passage and question carefully, and then choose the best answer to the question based on the passage(s).

All questions in this section are multiple-choice with four answer choices. Each question has a single best answer. Circle your answer in the booklet.

PACE YOURSELF

You have **39 minutes** for **33 questions**, which is about **71 seconds** a question. Answer what you can quickly, circle the ones that need more time, and come back to them before time is called. There is no penalty for a wrong answer, so never leave a question blank. This module is harder than Module 1.

WHAT YOU WILL SEE IN THIS MODULE

- Words in context
- Text structure and purpose
- Cross-text connections
- Central ideas and details
- Command of evidence: quantitative
- Command of evidence: textual
- Inferences
- Form, structure, and sense
- Boundaries
- Transitions
- Rhetorical synthesis

Questions 1 to 4 of 33

1 WORDS IN CONTEXT

The ruling was widely read as a _____ of the court's earlier position: where the justices had once insisted that such searches required a warrant, they now held that no warrant was needed.

Which choice completes the text with the most logical and precise word or phrase?

(A) reaffirmation
(B) postponement
(C) clarification
(D) reversal

2 WORDS IN CONTEXT

The novelist's prose is deceptively _____ : its short, plain sentences seem effortless, yet each one conceals a long process of revision and a precise choice of rhythm.

Which choice completes the text with the most logical and precise word or phrase?

(A) labyrinthine
(B) unadorned
(C) ostentatious
(D) turgid

3 WORDS IN CONTEXT

Because the manuscript had been stored in a sealed vault, its colours were still remarkably _____ after six centuries, while those of a similar manuscript left on open shelves had faded almost entirely.

Which choice completes the text with the most logical and precise word or phrase?

(A) muted
(B) unstable
(C) vivid
(D) ordinary

4 WORDS IN CONTEXT

The politician's apology was widely seen as _____ : she admitted that the remarks had caused offence but declined to say whether she regretted making them.

Which choice completes the text with the most logical and precise word or phrase?

(A) evasive
(B) unreserved
(C) belated
(D) heartfelt

5 WORDS IN CONTEXT

Archaeologists were struck by how _____ the settlement's layout was: every house faced the river at the same angle, and the streets ran in parallel lines across the whole site.

Which choice completes the text with the most logical and precise word or phrase?

A) haphazard

B) ephemeral

C) regimented

D) fortuitous

6 TEXT STRUCTURE AND PURPOSE

The following text is adapted from an original essay about the history of the telescope.

> When Galileo first turned his telescope to the night sky in 1609, he saw mountains on the moon. This was not, at first, a welcome discovery. The prevailing doctrine held that heavenly bodies were perfect spheres, and a cratered, mountainous moon was an affront to it. Galileo's critics did not deny that the instrument magnified; they denied that what it showed could be trusted.

Which choice best describes the function of the underlined sentence in the text as a whole?

A) It describes how Galileo made his telescope.

B) It argues that heavenly bodies are perfect spheres.

C) It compares Galileo's discovery with earlier ones.

D) It explains why an observation was met with resistance.

7 TEXT STRUCTURE AND PURPOSE

The following text is from an original novel. Joaquín has returned to the town where he grew up to sell his late father's shop.

> The shop had always smelled of machine oil and tea, and for a moment, as the bell rang above the door, Joaquín was nine again, standing on a crate to reach the counter. Then he saw the dust. It lay on the shelves in a fine grey skin, undisturbed, and he understood that his father's last months had been spent in the back room while the front quietly gave up. The estate agent, waiting by the window, asked whether he would like to see the figures. Joaquín said he would, and did not move.

Which choice best describes the function of the sentence beginning "Then he saw the dust" in the text as a whole?

A) It marks the shift from Joaquín's memory of the shop to a realisation about his father's decline.

B) It shows that the estate agent has neglected the shop.

C) It explains why Joaquín decided to sell the shop.

D) It suggests that Joaquín has not been to the shop since childhood.

8 TEXT STRUCTURE AND PURPOSE

The following text is from an original poem.

> When I was young I thought a map was fact:
> the lines were rivers, and the rivers ran.
> I did not see the hand that drew, the pact
> between the mapmaker's pen and the man
> who paid. Now, older, I have learned to read
> the margins, where the mapmaker has left
> a hand of doubt: a dotted line, a seed
> of question marks, a coast of "perhaps," bereft.

Which choice best describes the overall structure of the text?

(A) The speaker describes a journey, then explains why it failed.

(B) The speaker recalls an earlier, trusting view of maps and then describes a more sceptical understanding.

(C) The speaker praises a mapmaker, then criticises the people who paid for the maps.

(D) The speaker states a rule about maps, then gives examples of exceptions.

9 CROSS-TEXT CONNECTIONS

TEXT 1

Some economists argue that minimum wage increases reduce employment because they raise the cost of labour. If employers must pay more for each worker, they will hire fewer workers or reduce hours.

TEXT 2

A labour economist reports on a study of neighbouring counties on either side of a state border, one of which raised its minimum wage. She found that employment in the two counties moved in step before and after the increase, and she suggests that employers may respond to higher wages in ways that do not involve cutting jobs, such as raising prices or accepting lower turnover costs.

Based on the texts, how would the economist in Text 2 most likely respond to the argument in Text 1?

(A) By agreeing that employers always reduce workers' hours

(B) By arguing that the minimum wage should be abolished

(C) By claiming that employers pay workers more than the minimum wage

(D) By pointing out that evidence from the border counties does not match the effect Text 1 predicts

10 CENTRAL IDEAS AND DETAILS

The following text is adapted from an original science article.

> For years, ecologists assumed that wolves reintroduced to a park would improve the health of its rivers only indirectly, by reducing the number of grazing deer and so allowing streamside trees to recover. A new analysis suggests the effect may be smaller than claimed. Rivers in comparable parks without wolves also recovered over the same period, apparently because a series of wet years restored the water table, and the study's authors urge caution in crediting any single cause.

Which choice best states the main idea of the text?

(A) Wolves have no effect on the numbers of deer in a park.

(B) A new analysis challenges the assumption that wolves were chiefly responsible for the recovery of the parks' rivers.

(C) Rivers recover only when the water table is restored by wet years.

(D) Ecologists agree that reintroducing wolves has harmed rivers.

11 CENTRAL IDEAS AND DETAILS

The following text is adapted from an original essay about an architect.

> The architect Delphine Marchetti is often described as a minimalist, but she rejects the label. Her buildings are spare, she says, not because she values emptiness but because she wants nothing to distract from the light, which she treats as her principal material. In her best-known museum, the walls carry no ornament, yet the ceilings are pierced with openings of varying sizes so that the galleries change from hour to hour.

Which choice best states the main idea of the text?

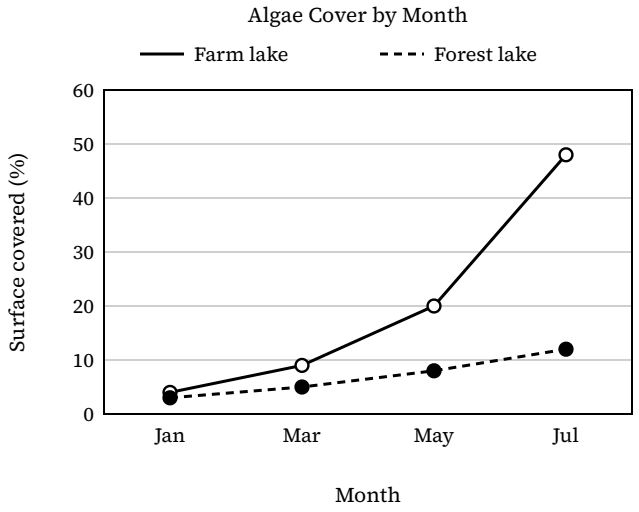

(A) Marchetti's spare designs serve her interest in light rather than a belief in emptiness.

(B) Marchetti rejects the use of light in her buildings.

(C) Marchetti's museum was designed to remain the same throughout the day.

(D) Marchetti is widely thought to be a maximalist.

12 COMMAND OF EVIDENCE: QUANTITATIVE

Researchers tracked the percentage of a lake's surface covered by algae in each month of a year in two different lakes, one with a nearby farm and one in a protected forest. A student wants to claim that nutrient runoff from farms worsens algae growth in summer.

Which choice most effectively uses data from the graph to support the student's claim?

(A) In January, algae covered 4 percent of the lake near the farm and 3 percent of the forest lake.

(B) In July, algae covered 48 percent of the lake near the farm, up from 20 percent in May.

(C) In July, algae covered 48 percent of the lake near the farm but only 12 percent of the forest lake.

(D) Algae covered more of each lake in July than in January.

13 COMMAND OF EVIDENCE: QUANTITATIVE

Visitors to Special Exhibitions

Exhibition	2021	2023
Textiles	14,900	21,300
Glass	15,200	17,300
Sculpture	18,000	16,500

A museum counted the number of visitors who attended special exhibitions in three years. A curator wants to argue that the exhibition on textiles drew the largest increase in attendance.

Which choice most effectively uses data from the table to support the curator's claim?

(A) Attendance at the textiles exhibition was 21,300 in 2023, higher than for the glass exhibition.

(B) Attendance at the glass exhibition rose by 2,100 visitors between 2021 and 2023.

(C) Attendance at the textiles exhibition rose by 6,400 visitors between 2021 and 2023, more than the rise for either the glass or the sculpture exhibition.

(D) Attendance at the sculpture exhibition fell from 18,000 in 2021 to 16,500 in 2023.

14 COMMAND OF EVIDENCE: TEXTUAL

The following text is adapted from an original essay about an economist.

> The economist Odile Fontaine argued that markets are less self-correcting than is commonly assumed. A boom, she wrote, tends to persuade investors that prices will keep rising, and their buying is what drives the prices higher; the process feeds itself until it exhausts the supply of buyers, at which point the same logic runs in reverse.

A student claims that, in Fontaine's view, markets can magnify their own swings. Which quotation from the text best supports the student's claim?

(A) "The economist Odile Fontaine argued that markets are less self-correcting than is commonly assumed."

(B) "A boom, she wrote, tends to persuade investors that prices will keep rising"

(C) "their buying is what drives the prices higher"

(D) "the process feeds itself until it exhausts the supply of buyers, at which point the same logic runs in reverse"

15 COMMAND OF EVIDENCE: TEXTUAL

A student is researching why some mountain lakes have no fish.

> The ecologist Hana Reyes reports that lakes above 3,000 metres in the study area contained no fish, even though they had suitable temperatures and plenty of insects. Each of those lakes is separated from lower waters by waterfalls steeper than any fish can climb.

Which finding, if true, would most directly support the claim that waterfalls explain the absence of fish in the high lakes?

(A) Fish introduced by hikers to one high lake soon became established and thrived.

(B) The high lakes freeze for several months each winter.

(C) Insects in the high lakes are smaller than those in lower lakes.

(D) Several of the high lakes were formed by glaciers.

16 COMMAND OF EVIDENCE: TEXTUAL

The following text is from an original essay about handwriting.

> Proponents of handwritten notes argue that writing by hand slows students down, forcing them to summarise what they hear rather than transcribe it word for word. In one study, students who took notes by hand performed better on conceptual questions than those who typed, although the two groups did equally well on questions of simple fact.

Which choice best describes the evidence from the study that supports the proponents' argument?

(A) Students who typed did better on questions of simple fact.

(B) Students who took notes by hand did better on conceptual questions than students who typed.

(C) Students who typed took notes more slowly than students who wrote by hand.

(D) Students who took notes by hand wrote more words than students who typed.

17 INFERENCES

The following text is adapted from an original essay about a lost language.

> A fragment of a tablet found at the excavation bears a script that scholars have been unable to read. But the fragment also contains a short list in which the same sign recurs beside what appear to be numerals, and in a similar tablet from a neighbouring site the same sign appears beside sketches of grain. This pattern suggests that the sign probably represents

Which choice most logically completes the text?

(A) a name for the neighbouring site.

(B) a unit of measure for grain.

(C) a word that cannot be translated.

(D) a numeral used only in lists.

18 INFERENCES

The following text is from an original essay about a manufacturing process.

> When the factory switched from steel to a lighter alloy for its bicycle frames, engineers expected a drop in strength. Instead, tests showed that the alloy frames lasted longer under repeated loading, because the alloy flexes slightly where steel stiffens and then cracks. If the engineers' finding is representative, a frame's durability under repeated use depends less on how strong the material is than on

Which choice most logically completes the text?

(A) how much the finished frame weighs.

(B) whether the frame is made of steel.

(C) how well the material tolerates repeated flexing.

(D) how quickly the frame can be made.

19 INFERENCES

The following text is adapted from an original science article.

> Some deep-sea fish produce light in their bodies through a chemical reaction. Although many species share the trait, genetic studies show that they acquired it independently, at least twenty times. That repeated, separate emergence of the same ability suggests that producing light in the deep sea

Which choice most logically completes the text?

(A) confers a survival advantage in that environment.

(B) is possible only for a single type of fish.

(C) occurs in all fish regardless of habitat.

(D) is a trait inherited from a single common ancestor.

20 FORM, STRUCTURE, AND SENSE

The photographs, _____ were taken during the expedition's second winter, show the ice receding from the coast.

Which choice completes the text so that it conforms to the conventions of Standard English?

(A) that

(B) who

(C) what

(D) which

Questions 21 to 24 of 33

21 BOUNDARIES

The theory, first proposed in 1962, _____ now supported by evidence from three separate fields.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) is
B) are
C) being
D) having been

22 FORM, STRUCTURE, AND SENSE

Not only _____ the new regulations lower costs, but they also improve safety.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) does
B) did not
C) to
D) do

23 FORM, STRUCTURE, AND SENSE

The conductor's interpretation of the symphony differs significantly from _____ of her predecessor.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) those
B) that
C) this
D) it

24 FORM, STRUCTURE, AND SENSE

Because the shipping lanes were closed by ice, _____

Which choice completes the text so that it conforms to the conventions of Standard English?

A) a southern port was used by the company to reroute its cargo.
B) rerouting through a southern port was done.
C) the company rerouted its cargo through a southern port.
D) cargo was rerouted by the company through a southern port, because of the ice.

25 FORM, STRUCTURE, AND SENSE

Of all the instruments in the orchestra, the cello is often described as the _____ to the human voice.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) closer
B) more close
C) most closer
D) closest

26 BOUNDARIES

The committee, having reviewed all of the applications _____ chose three finalists.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) ,
B) ;
C) :
D) .

27 BOUNDARIES

The lecturer asked _____ had read the assigned chapter.

Which choice completes the text so that it conforms to the conventions of Standard English?

A) whom
B) whose
C) who
D) which

28 TRANSITIONS

Some scholars have argued that the manuscript is a forgery. _____ the ink, which has been dated to the thirteenth century, supports the claim that it is authentic.

Which choice completes the text with the most logical transition?

A) Specifically,
B) On the other hand,
C) For this reason,
D) Likewise,

29 TRANSITIONS

The company's earnings fell in the first quarter. _____ its share price rose, as investors had expected a worse result.

Which choice completes the text with the most logical transition?

(A) Hence,

(B) Similarly,

(C) Even so,

(D) Previously,

30 TRANSITIONS

The older bridge is narrow, and its surface is badly worn. _____ repairing it would cost less than building a new one.

Which choice completes the text with the most logical transition?

(A) Still,

(B) Thus,

(C) Moreover,

(D) For example,

31 RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- In 1998, Dr. Lena Park measured the speed of a certain enzyme at 40 reactions per second.
- In 2015, Dr. Omar Haddad measured the same enzyme at 400 reactions per second.
- Haddad used a newer type of detector.
- Park used a spectrometer.
- Both studies were published in the same journal.

The student wants to emphasise a contrast between two scientists' findings.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Both Park and Haddad published their studies in the same journal.

(B) Park used a spectrometer, whereas Haddad used a newer detector.

(C) Dr. Haddad measured the enzyme in 2015, and Dr. Park measured it in 1998.

(D) While Park measured the enzyme at 40 reactions per second in 1998, Haddad's 2015 measurement was ten times higher, at 400.

32 RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- Desalination plants remove salt from seawater.
- In one common method, seawater is pushed through a very fine membrane.
- The membrane lets water through but blocks the salt.
- The process requires a lot of electricity.
- Several countries rely on desalination for drinking water.

The student wants to explain how a process works to a general audience.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Desalination plants require large amounts of electricity.

(B) In a common method of desalination, seawater is pushed through a membrane that lets water through but blocks the salt.

(C) Several countries rely on desalination plants for drinking water.

(D) Desalination plants remove salt from seawater.

33 RHETORICAL SYNTHESIS

While researching a topic, a student has taken the following notes:

- A study of 1,200 adults compared two ways of learning a new language.
- One group used spaced practice, reviewing words at increasing intervals.
- The other group crammed words in a single session.
- After a month, the spaced practice group remembered 30 percent more words.
- The study was carried out at a university in Toronto.

The student wants to present a recommendation supported by research.

Which choice most effectively uses relevant information from the notes to accomplish this goal?

(A) Learners who want to remember more vocabulary should review words at increasing intervals, since in a study of 1,200 adults this approach produced 30 percent better recall after a month than cramming.

(B) A study of 1,200 adults at a university in Toronto compared two ways of learning a language.

(C) Cramming words in a single session produced worse recall than spaced practice.

(D) Spaced practice means reviewing words at increasing intervals.

STOP If you finish before time is called, you may check your work on this module only. Do not turn to any other module in the test.

2 Math

27 QUESTIONS 43 MINUTES

DIRECTIONS

The questions in this section address a number of important math skills. Use of a calculator is permitted for all questions.

NOTES

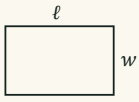

Unless otherwise indicated:

- All variables and expressions represent real numbers.
- Figures provided are drawn to scale.
- All figures lie in a plane.
- The domain of a given function f is the set of all real numbers x for which $f(x)$ is a real number.

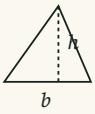

REFERENCE

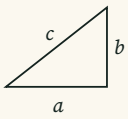

$A = \pi r^2$
$C = 2\pi r$

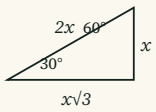

$A = \ell w$

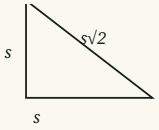

$A = \frac{1}{2}bh$

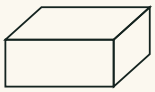

$c^2 = a^2 + b^2$

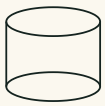

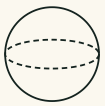

Special right triangles

$V = \ell wh$

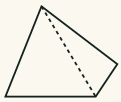

$V = \pi r^2 h$

$V = \frac{4}{3}\pi r^3$

$V = \frac{1}{3}\pi r^2 h$

$V = \frac{1}{3}\ell wh$

The number of degrees of arc in a circle is 360. The number of radians of arc in a circle is 2π. The sum of the measures in degrees of the angles of a triangle is 180.

ANSWERING THE QUESTIONS

For multiple-choice questions, solve each problem, choose the correct answer from the choices provided, and then circle your answer in the booklet. Circle only one answer for each question. If you change your mind, completely erase the circle. You will not get credit for questions with more than one answer circled, or for questions with no answers circled.

For student-produced response questions, solve each problem and write your answer in the box under the question.

- If you find **more than one correct answer,** write only one answer.
- Your answer can be up to 5 characters for a **positive** answer and up to 6 characters (including the negative sign) for a **negative** answer, but no more.
- If your answer is a **fraction** that is too long, write the decimal equivalent.
- If your answer is a **decimal** that is too long, truncate it or round at the fourth digit.
- If your answer is a **mixed number** (such as 3½), write it as an improper fraction (7/2) or its decimal equivalent (3.5).
- Do not include **symbols** such as a percent sign, comma, or dollar sign in your answer.

PACE YOURSELF

You have **43 minutes** for **27 questions**, which is about **96 seconds** a question. Answer what you can quickly, circle the ones that need more time, and come back to them before time is called. There is no penalty for a wrong answer, so never leave a question blank.

WHAT YOU WILL SEE IN THIS MODULE

Percentages | Data analysis | Linear equations | Linear equations in context | Systems of equations | Functions | Nonlinear expressions | Ratios and rates | Triangles | Circles | Quadratics | Probability | Statistics | Scatterplots | Inequalities | Exponential functions | Linear functions | Percent change | Right triangles | Volume | Area

Questions 1 to 5 of 27

1 PERCENTAGES

What is 15% of 300?

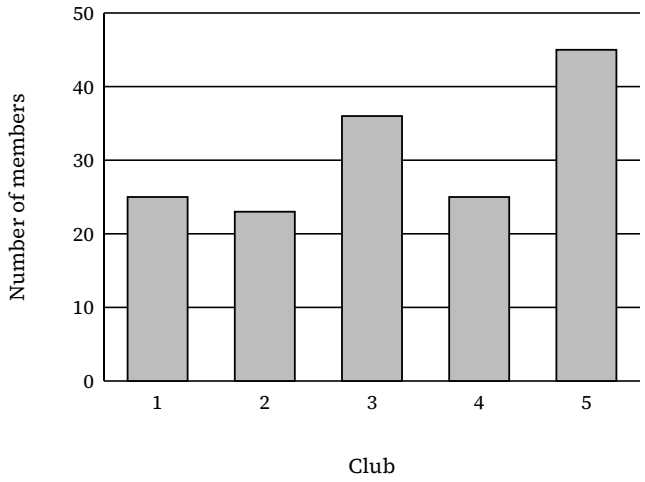

A) 255

B) 90

C) 45

D) 315

2 DATA ANALYSIS

The bar graph shows the number of members in each of five clubs. How many more members does Club 4 have than Club 2?

A) 48

B) 2

C) 12

D) 25

3 LINEAR EQUATIONS

If $9x - 3 = 5x + 41$, what is the value of x?

A) 11

B) 13

C) 99

D) 22

4 LINEAR EQUATIONS IN CONTEXT

A taxi charges a flat fee of $58 plus $23 per mile. Which equation gives the total cost y, in dollars, of a trip for m miles?

A) $y = 58m + 23$

B) $y = 81m$

C) $y = 23m - 58$

D) $y = 23m + 58$

5 SYSTEMS OF EQUATIONS

$x + y = 20$
$x - y = 6$

What is the value of y?

A) 13

B) 20

C) 6

D) 7

6

FUNCTIONS

x	1	2	3	4
f(x)	7	13	19	25

The table shows four values of the linear function f. Which equation defines f?

A) $f(x) = x + 6$

B) $f(x) = 6x + 1$

C) $f(x) = 6x + 7$

D) $f(x) = 7x$

7

NONLINEAR EXPRESSIONS

Which expression is equivalent to $(3x^4)(5x^4)$?

A) $8x^8$

B) $15x^{16}$

C) $15x^8$

D) $8x^{16}$

8

RATIOS AND RATES

A recipe uses 7 cups of flour for every 2 cups of sugar. How many cups of flour are needed for 18 cups of sugar?

A) 63

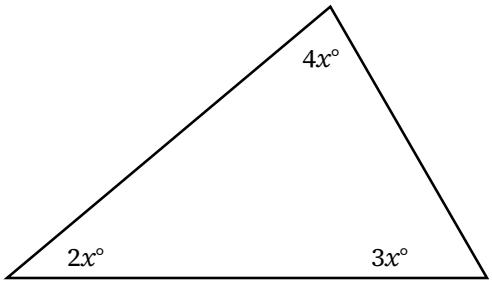

B) 65

C) 16

D) 18

9

TRIANGLES

In the triangle shown, the three angles measure $2x°$, $3x°$, $4x°$. What is the value of x?

A) 15

B) 30

C) 20

D) 60

10

CIRCLES

A circle has a circumference of 10π centimetres. What is the area of the circle, in square centimetres?

A) 10π

B) 5π

C) 100π

D) 25π

11 QUADRATICS

What are the solutions to $x^2 - 2x - 8 = 0$?

A) 4 and 2

B) −2 and 4

C) −4 and −2

D) −4 and 2

12 PROBABILITY

How Students Travel to School

	Walk	Bike	Bus
Grade 9	28	11	30
Grade 10	21	11	16

The table shows how 117 students travel to school. If one student who goes by walking is chosen at random, what is the probability that the student is in Grade 10?

A) $\frac{3}{7}$

B) $\frac{21}{117}$

C) $\frac{28}{49}$

D) $\frac{49}{117}$

13 STATISTICS

The mean of 5 test scores is 82. A score of 94 is added. What is the mean of all 6 scores?

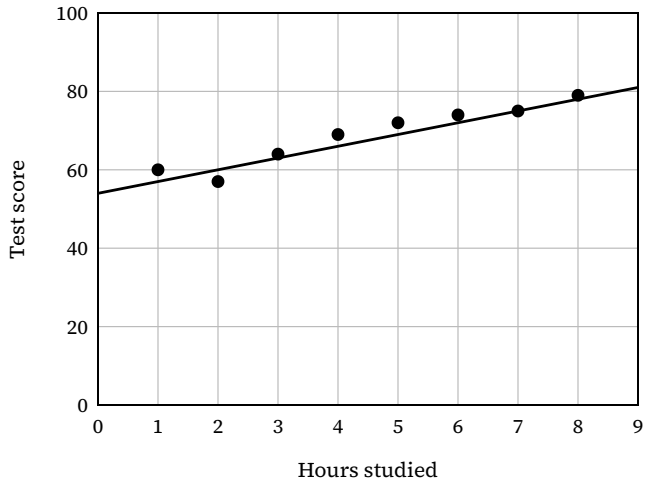

A) 88

B) 83

C) 84

D) 87

14 SCATTERPLOTS

The scatterplot shows the hours students studied and their test scores. The line of best fit is $y = 3x + 54$. According to the line, what is the predicted score for a student who studies 5 hours?

A) 15

B) 69

C) 66

D) 62

15 INEQUALITIES

A club needs at least 150 members to enter a competition, and 35 have already joined. If 15 new members join each week, which inequality represents the number of weeks, w, needed to reach the goal?

(A) $35 + 15w \leq 150$

(B) $15 + 35w \geq 150$

(C) $150 + 15w \geq 35$

(D) $35 + 15w \geq 150$

16 FUNCTIONS

The function f is defined by $f(x) = 5x^2 - 3x + 5$. What is the value of $f(5)$?

(A) 115

(B) 145

(C) 15

(D) 120

17 EXPONENTIAL FUNCTIONS

A population of bacteria doubles every 6 hours. There are 800 bacteria at the start. Which function gives the number of bacteria after t hours?

(A) $P(t) = 800(2)^{6t}$

(B) $P(t) = 800(2)^{t/6}$

(C) $P(t) = 800(6)^{t/2}$

(D) $P(t) = 1600(t/6)$

18 LINEAR FUNCTIONS

A line in the xy-plane passes through the points (2, 0) and (4, 4). Which equation represents the line?

(A) $y = 3x - 4$

(B) $y = 2x - 2$

(C) $y = 2x - 4$

(D) $y = x + 4$

19 PERCENT CHANGE

A town's population grew from 12,000 to 13,800. By what percent did the population increase?

(A) 20%

(B) 30%

(C) 13%

(D) 15%

20 RIGHT TRIANGLES

A right triangle has legs of length 7 and 24. What is the length of its hypotenuse?

(A) 25

(B) 31

(C) 625

(D) 17

Questions 21 to 27 of 27

21 PERCENT CHANGE

The price of a concert ticket rose from $20 to $24. By what percent did the price increase?

Write your answer

22 RATIOS AND RATES

A car travels 384 miles on 8 gallons of fuel. At the same rate, how many gallons are needed to travel 288 miles?

Write your answer

23 VOLUME

A cylinder has a radius of 6 and a height of 11. Its volume is $k\pi$. What is the value of k?

Write your answer

24 LINEAR EQUATIONS

If $3(x - 4) = 6x - 48$, what is the value of x?

Write your answer

25 SYSTEMS OF EQUATIONS

The sum of two numbers is 34, and their difference is 12. What is the larger of the two numbers?

Write your answer

26 AREA

What is the area, in square units, of a triangle with a base of 18 and a height of 7?

Write your answer

27 QUADRATICS

What is the positive solution to the equation $x^2 - 5x - 66 = 0$?

Write your answer

STOP If you finish before time is called, you may check your work on this module only. Do not turn to any other module in the test.

2 Math Module 2

27 QUESTIONS 43 MINUTES

DIRECTIONS

The questions in this section address a number of important math skills. Use of a calculator is permitted for all questions.

NOTES

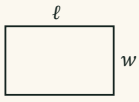

Unless otherwise indicated:

- All variables and expressions represent real numbers.
- Figures provided are drawn to scale.
- All figures lie in a plane.
- The domain of a given function f is the set of all real numbers x for which $f(x)$ is a real number.

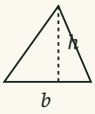

REFERENCE

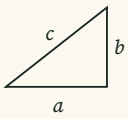

$A = \pi r^2$
$C = 2\pi r$

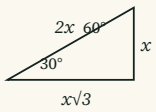

$A = \ell w$

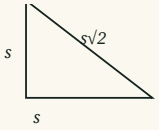

$A = \frac{1}{2}bh$

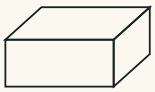

$c^2 = a^2 + b^2$

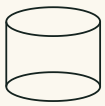

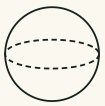

Special right triangles

$V = \ell wh$

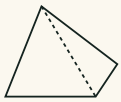

$V = \pi r^2 h$

$V = \frac{4}{3}\pi r^3$

$V = \frac{1}{3}\pi r^2 h$

$V = \frac{1}{3}\ell wh$

The number of degrees of arc in a circle is 360. The number of radians of arc in a circle is 2π. The sum of the measures in degrees of the angles of a triangle is 180.

Questions 1 to 4 of 27

1 VOLUME

A cylinder has a radius of 6 centimetres and a height of 7 centimetres. What is its volume, in cubic centimetres?

A) 84π

B) 252π

C) 42π

D) 756π

2 PROBABILITY

How Students Travel to School

	Walk	Bike	Bus
Grade 9	14	17	19
Grade 10	20	10	26

The table shows how 106 students travel to school. If one student who goes by bus is chosen at random, what is the probability that the student is in Grade 10?

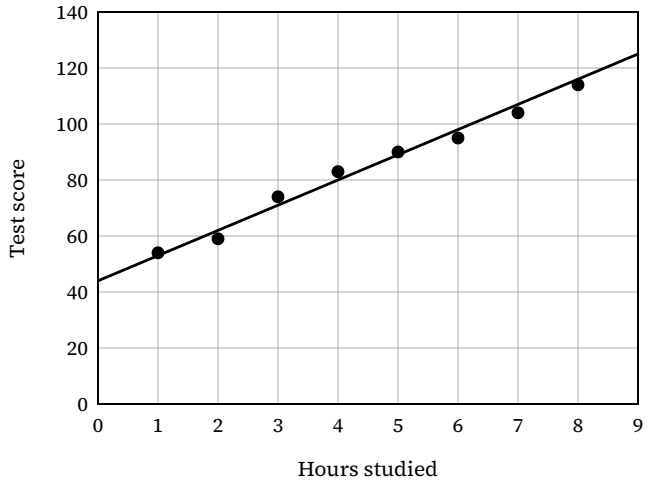

A) $\frac{26}{45}$

B) $\frac{26}{106}$

C) $\frac{19}{45}$

D) $\frac{45}{106}$

3 SCATTERPLOTS

The scatterplot shows the hours students studied and their test scores. The line of best fit is $y = 9x + 44$. According to the line, what is the predicted score for a student who studies 5 hours?

A) 45

B) 80

C) 58

D) 89

4 FUNCTIONS

The function f is defined by $f(x) = 4x^2 - 6x + 6$. What is the value of $f(2)$?

A) 34

B) 2

C) 10

D) 16

5 STATISTICS

The mean of 6 test scores is 60. A score of 81 is added. What is the mean of all 7 scores?

A) 70.5

B) 61

C) 63

D) 66

6 LINEAR EQUATIONS

If $5x + 6 = x + 22$, what is the value of x?

A) 6

B) 20

C) 8

D) 4

7 PERCENTAGES

What is 35% of 240?

A) 156

B) 84

C) 168

D) 275

8 CIRCLES

A sector of a circle has a radius of 15 and a central angle of $\frac{\pi}{4}$ radians. What is the length of the arc of the sector?

A) $\frac{15\pi}{4}$

B) 15π

C) 56π

D) 30π

9 EXPONENTIAL FUNCTIONS

$V(x) = 12{,}000(0.7)^{x/6}$

The function V gives the value, in dollars, of a certain machine x months after it is purchased. By what percent does the value of the machine decrease each year?

A) 70%

B) 30%

C) 49%

D) 51%

10 CIRCLES IN THE PLANE

The equation $(x-4)^2+(y+4)^2=36$ represents circle A in the xy-plane. Circle B is obtained by shifting circle A 3 units right and 2 units up. Which of the following equations represents circle B?

A $(x-1)^2+(y+2)^2=36$

B $(x-7)^2+(y+2)^2=36$

C $(x-7)^2+(y+6)^2=36$

D $(x-1)^2+(y+6)^2=36$

11 EXPONENTIAL EQUATIONS

If $2^{x+1}=4^{x-1}$, what is the value of x?

A 3

B 2

C 1

D 5

12 QUADRATICS

The function f is defined by $f(x)=x^2-12x+27$. What is the minimum value of f?

A 9

B 27

C -9

D 6

13 SYSTEMS OF EQUATIONS

$ax+3y=8$
$6x+9y=26$

In the given system of equations, a is a constant. If the system has no solution, what is the value of a?

A 2

B 6

C 5

D 9

14 ABSOLUTE VALUE

How many integers x satisfy the inequality $|x-3|\leq 3$?

A 6

B 4

C 7

D 3

15 EQUIVALENT EXPRESSIONS

Which expression is equivalent to $(4x+3)^2-(x-1)^2$?

A $15x^2+22x+8$

B $15x^2+26x+8$

C $15x^2+26x+10$

D $17x^2+26x+8$

16 RATIOS AND RATES

One pump can fill a tank in 6 hours, and a second pump can fill it in 3 hours. Working together, how many hours do the two pumps take to fill the tank?

(A) 4.5

(B) 9

(C) 3

(D) 2

17 STATISTICS

Data set A

Value	1	2	3	4	5
	3	5	6	6	8

Data set A has the five values shown. Data set B is formed by multiplying each value in A by 2 and then adding 8. Which of the following correctly compares the means and the standard deviations of the two data sets?

(A) The mean of data set B is 13.6 greater than the mean of data set A, and the standard deviations are equal.

(B) The mean of data set B is 13.6 greater than the mean of data set A, and the standard deviation of data set B is 2 times the standard deviation of data set A.

(C) The mean of data set B is 8 greater than the mean of data set A, and the standard deviation of data set B is 2 times the standard deviation of data set A.

(D) The mean of data set B is 2 times the mean of data set A, and the standard deviation of data set B is 8 greater than the standard deviation of data set A.

18 EQUIVALENT EXPRESSIONS

Which expression is equivalent to $\frac{x^2 - 9x + 14}{x - 7}$, where $x \neq 7$?

(A) $x + 2$

(B) $x - 7$

(C) $x - 2$

(D) $x - 14$

19 FUNCTIONS

The functions f and g are defined by $f(x) = 2x + 5$ and $g(x) = x^2 + 1$. What is the value of $f(g(3)) - g(f(3))$?

(A) -97

(B) 147

(C) 110

(D) 97

20 PERCENTAGES

50 is p% greater than 20. What is the value of p?

(A) 250

(B) 60

(C) 30

(D) 150

Questions 21 to 27 of 27

21 LINEAR EQUATIONS

If $4(x - 3) = 8x - 32$, what is the value of x?

Write your answer

22 QUADRATICS

$2x^2 + 2x - 24 = 0$

What is the sum of the solutions to the given equation?

Write your answer

23 QUADRATICS

The height h, in metres, of a ball t seconds after it is thrown is given by $h(t) = -t^2 + 4t + 6$. What is the maximum height, in metres, that the ball reaches?

Write your answer

24 CIRCLES IN THE PLANE

$x^2 + y^2 + 8x + 6y = 0$

The equation of a circle in the xy-plane is shown. What is the radius of the circle?

Write your answer

25 SIMILAR TRIANGLES

Triangle ABC is similar to triangle DEF, where A corresponds to D and B corresponds to E. In triangle ABC, AB = 5, BC = 5 and AC = 7. In triangle DEF, DE = 10. What is the perimeter of triangle DEF?

Write your answer

26 QUADRATICS

The equation $x^2 + bx + 16 = 0$, where b is a positive constant, has exactly one real solution. What is the value of b?

Write your answer

27 SYSTEMS WITH NONLINEAR EQUATIONS

$y = x^2 + 2x + 3$
$y = 6x + k$

In the given system of equations, k is a constant. If the system has exactly one solution, what is the value of k?

Write your answer

STOP If you finish before time is called, you may check your work on this module only. Do not turn to any other module in the test.

Answer sheet

SAT Practice Test 3, Reading and Writing

Fill in the circle for each answer, or write your student-produced answers in the boxes. Then mark yourself with the answer key.

Math, Module 1: ___ of 27

Module 2: ___ of 27

Answer explanations

SAT Practice Test 3, Reading and Writing, Module 1

Questions 1 to 17

1 **Choice C** Words in context

The colon explains what she does: she lets each loaf rise a full day however busy the shop is. That shows patience. Haste is the opposite, and nothing indicates secrecy or luck.

2 **Choice D** Words in context

Each side gave up something, which defines a compromise. A rivalry or stalemate would mean no agreement, and a monopoly is unrelated.

3 **Choice B** Words in context

Her earlier style contrasts with the short, plain lines of the new book, so the earlier sentences were elaborate and ornate. Terse and plain describe the new style, and hesitant does not fit elaborate.

4 **Choice A** Words in context

Birds that show little fear of approaching humans are unwary. Aggressive, migratory and ravenous do not explain the lack of fear.

5 **Choice A** Words in context

The board began to take her ideas seriously only after a smaller version succeeded, so the proposal had first been dismissed as impractical. Profitable and dazzling would not lead to dismissal, and a routine proposal would not be dismissed.

6 **Choice B** Text structure and purpose

The underlined sentence says what each partner provides, which explains how the partnership works. It does not dispute an earlier claim, compare organisms, or describe researchers.

7 **Choice D** Text structure and purpose

Counting tiles and crushing the sheet music suggest Ravi's tension and disappointment. The text gives no reasons from the director, shows no relief, and does not discuss why he became a musician.

8 **Choice C** Text structure and purpose

The first stanza describes an orchard at the season's end, and the second attributes belief to the ladder. No list of tasks, childhood or argument appears.

9 **Choice A** Cross-text connections

Text 2 suggests extra support at home may explain the scores, so the studies do not prove homework is the cause. The teacher does not say homework hurts or recommend more of it.

10 **Choice C** Central ideas and details

The text describes replay of daily activity during sleep and better recall after sleeping, so sleep helps consolidate learning. It contradicts the idea of an inactive brain, and nothing suggests sleep matters less than studying.

11 **Choice B** Central ideas and details

The text contrasts the village's look of stillness with a record of fires, a shifting river and emigration, and calls the stillness the result of recoveries. It does not predict disappearance, or say anything about visitors' reading or the mill's success.

12 **Choice D** Command of evidence: quantitative

Rapid growth in spring is shown by the rise from 120 in March to 310 in May, which the first choice reports. The others reverse the trend, list extremes without the rise, or cover a slower period.

13 **Choice C** Command of evidence: quantitative

The claim links iced drinks with warm weather, so the right choice compares the iced share on warm and cool days. The others discuss hot drinks or lack the comparison.

14 **Choice A** Command of evidence: textual

The change is shown by the later date of mid-March compared with the first week of April, and only the first quotation gives the later arrival. The others describe the record keeping or the earlier date alone.

15 **Choice B** Command of evidence: textual

Higher attention scores in the group that practised an instrument support the claim. The age of the children and the length of the lessons do not show an effect on attention.

16 **Choice D** Command of evidence: textual

The text says the deck swayed in strong winds and unsettled walkers. Engineers praised the slenderness, the city installed dampers, and nothing says the bridge was too narrow.

Answer explanations

SAT Practice Test 3, Reading and Writing, Module 1

Questions 18 to 33

18 Choice B Inferences

Higher levels near the airport suggest noise may contribute, while the caution means it is not the only factor. The other choices overstate the findings.

19 Choice D Inferences

Speakers must mark the source of every statement and are judged by it, so accuracy about the source matters socially. The text does not support the other options.

20 Choice A Form, structure, and sense

The subject is the plural roses, so the present tense verb bloom agrees. Blooms and has bloomed are singular, and blooming is not a finite verb.

21 Choice A Boundaries

The relative pronoun is the subject of the verb had played, so who is correct, and the clause needs the verb had. The other choices use the wrong pronoun or omit the verb.

22 Choice C Form, structure, and sense

The second clause contrasts with the first, so although is the right conjunction.

23 Choice B Form, structure, and sense

The items in a series must have the same form, so to dive, to swim, and to explore is parallel. The others mix forms.

24 Choice D Boundaries

The possessive pronoun its shows that the volunteers belong to the sanctuary. It's means it is, and their's is not a word.

25 Choice D Boundaries

The subject is the singular report; along with its appendices does not make it plural. The singular verb is agrees.

26 Choice A Form, structure, and sense

The infinitive to win modifies first student. The other choices are ungrammatical.

27 Choice B Form, structure, and sense

The participial phrase eager to see completes the sentence properly. They were eager would create a comma splice, and the others are ungrammatical.

28 Choice C Transitions

The longer running time contrasts with what a smaller battery would suggest, so Even so is the correct transition.

29 Choice D Transitions

The second sentence introduces a different use of honey, so However is a suitable transition in this context. Thus and For example do not fit.

30 Choice C Transitions

The minority view contrasts with the majority, so Still is the best transition.

31 Choice B Rhetorical synthesis

To introduce her work, the choice must say who she is and what she studies, which the first choice does. The others give a workplace, a date or a general fact.

32 Choice A Rhetorical synthesis

The goal is to explain the tool's purpose, so the choice should describe what it measures and how sailors use it, which the first choice does.

33 Choice D Rhetorical synthesis

A comparison needs the shared feature and a contrast between them, which the first choice supplies. The others describe one city or give separate facts.

Answer explanations

SAT Practice Test 3, Reading and Writing, Module 2

Questions 1 to 17

1 **Choice D** Words in context

The court once required a warrant and now does not, so the ruling reverses its earlier stance. Reaffirmation and clarification would keep the position, and postponement does not fit the change.

2 **Choice B** Words in context

Short plain sentences are unadorned, and deceptively signals that the plainness hides effort. Labyrinthine, ostentatious and turgid all describe ornate or complicated writing.

3 **Choice C** Words in context

The contrast with the faded manuscript shows that the vault-stored colours stayed bright, which vivid means. Muted would describe faded colours, and nothing suggests the colours were unstable or ordinary.

4 **Choice A** Words in context

She acknowledged offence without admitting regret, which is evasive. Unreserved and heartfelt describe sincere apologies, and nothing in the passage concerns timing.

5 **Choice C** Words in context

Houses at the same angle and parallel streets show a rigid order, which regimented captures. Haphazard and fortuitous suggest the opposite, and ephemeral means short-lived.

6 **Choice D** Text structure and purpose

The underlined sentence says the doctrine of perfect spheres made the mountainous moon unwelcome, which explains the resistance described. It does not describe the telescope's construction or argue for the doctrine.

7 **Choice A** Text structure and purpose

The sentence turns from Joaquín's childhood memory to the evidence of neglect, from which he infers his father's decline. The text does not blame the agent, give his reason for selling or say when he last visited.

8 **Choice B** Text structure and purpose

The first half describes the speaker's youthful belief that maps were fact, and the second half describes learning to read the signs of doubt. There is no journey, praise of a mapmaker or rule with exceptions.

9 **Choice D** Cross-text connections

Text 2 found employment moved in step across the border, which does not match the fall in jobs that Text 1 predicts. It does not support abolition, and does not discuss pay above the minimum.

10 **Choice B** Central ideas and details

The text reports that rivers in parks without wolves also recovered and urges caution in crediting wolves, so the analysis challenges the assumption. It does not say wolves have no effect on deer, that recovery needs wet years, or that wolves harmed rivers.

11 **Choice A** Central ideas and details

The text says Marchetti rejects the minimalist label because her spareness serves the light, which she treats as her main material. She uses light, the galleries change, and she is described as a minimalist.

12 **Choice C** Command of evidence: quantitative

The claim involves a comparison between the farm lake and the forest lake in summer, which the first choice gives. January figures are not summer, and the other choices ignore the comparison.

13 **Choice C** Command of evidence: quantitative

The claim is about the largest increase, so the correct choice compares the rises. The others report a single year, one exhibition's rise, or a decrease.

14 **Choice D** Command of evidence: textual

Magnifying swings means a self-reinforcing process in both directions, which the last sentence states directly. The other quotations state her thesis or one step in the cycle without showing the full swing.

15 **Choice A** Command of evidence: textual

If fish thrive once placed in a high lake, then conditions there are suitable and only the barrier of waterfalls explains their absence. The other findings do not isolate waterfalls as the cause.

16 **Choice B** Command of evidence: textual

The argument is that summarising helps understanding, and the study found handwriting led to better results on conceptual questions. The groups did equally well on facts, and the text does not compare speed or word counts.

Answer explanations

SAT Practice Test 3, Reading and Writing, Module 2

Questions 18 to 33

18 **Choice C** Inferences

The alloy outlasted steel because it flexes without cracking, so durability depends on tolerance to repeated flexing rather than raw strength. Weight, steel and manufacturing speed are not the basis of the finding.

19 **Choice A** Inferences

A trait that evolves independently many times usually offers an advantage in the environment where it appears. The text rules out a single origin and does not say it occurs in all fish.

20 **Choice D** Form, structure, and sense

The nonessential clause is set off with commas, so the relative pronoun which is needed. That cannot follow a comma in this construction.

21 **Choice A** Boundaries

The subject theory is singular, and the sentence needs a finite verb in the present tense, so is is correct.

22 **Choice D** Form, structure, and sense

After Not only the auxiliary comes before the subject, and the plural subject regulations needs do.

23 **Choice B** Form, structure, and sense

The pronoun stands for the singular interpretation, so that is correct. Those would be plural.

24 **Choice C** Form, structure, and sense

The opening clause explains why the company acted, so the company must be the subject of the main clause. The other choices shift the subject or repeat the reason.

25 **Choice D** Form, structure, and sense

With more than two items, the superlative closest is required. Closer is the comparative, and the others are not idiomatic.

26 **Choice A** Boundaries

The participial phrase having reviewed all of the applications is introductory to the main clause and must be followed by a comma. The other marks would separate it as if it were a complete sentence.

27 **Choice C** Boundaries

The pronoun is the subject of had read, so who is correct.

28 **Choice B** Transitions

The ink dating contrasts with the argument that the manuscript is a forgery, so On the other hand is the logical transition.

29 **Choice C** Transitions

The share price rising contradicts what falling earnings would suggest, so Even so is correct.

30 **Choice A** Transitions

The lower cost of repair is a point in favour of repair that qualifies the bridge's poor condition, so Still is the suitable transition.

31 **Choice D** Rhetorical synthesis

A contrast between findings needs both values, which the first choice supplies. The others describe the journal, the instruments or the dates, not the findings.

32 **Choice B** Rhetorical synthesis

To explain how the process works, the choice must describe the mechanism, which only the first does. The others state a cost, a use or a definition.

33 **Choice A** Rhetorical synthesis

A recommendation supported by research must state what to do and the evidence for it, which the first choice does. The others describe the study, one result or a definition.

Answer explanations

SAT Practice Test 3, Math, Module 1

Questions 1 to 14

1 **Choice C** Percentages

15% of 300 is 0.15 times 300, which is 45.

2 **Choice B** Data analysis

Club 4 has 25 and Club 2 has 23, and 25 minus 23 is 2.

3 **Choice A** Linear equations

Subtract 5x from both sides: 4x − 3 = 41. Then 4x = 44, so x = 11.

4 **Choice D** Linear equations in context

The fee is paid once, so it is the constant 58. The $23 repeats, so it multiplies m. The total is 23m + 58.

5 **Choice D** Systems of equations

Subtracting the second equation from the first gives 2y = 14, so y = 7.

6 **Choice B** Functions

Each step of 1 in x adds 6 to f(x), so the slope is 6. Then f(1) = 7 gives 6 + 1, so the intercept is 1.

7 **Choice C** Nonlinear expressions

Multiply the coefficients, 3 times 5 is 15, and add the exponents, 4 plus 4 is 8.

8 **Choice A** Ratios and rates

18 cups of sugar is 9 times 2 cups, so the flour is 9 times 7 cups, which is 63.

9 **Choice C** Triangles

The angles of a triangle add to 180°, so 2x + 3x + 4x = 9x = 180 and x = 20.

10 **Choice D** Circles

The circumference $2\pi r = 10\pi$ gives r = 5. The area is $\pi r^2 = 25\pi$.

11 **Choice B** Quadratics

The equation factors as (x − 4)(x + 2) = 0, so x = 4 or x = −2.

12 **Choice A** Probability

49 students travel that way and 21 of them are in Grade 10, so the probability is 21/49, which simplifies to 3/7. The fraction with 117 on the bottom uses every student.

13 **Choice C** Statistics

The first 5 scores total 410, and adding 94 gives 504. Divided by 6, the mean is 84.

14 **Choice B** Scatterplots

Substitute x = 5: 3(5) + 54 = 15 + 54 = 69.

Answer explanations

SAT Practice Test 3, Math, Module 1

Questions 15 to 27

15 Choice D Inequalities

The total is the 35 already joined plus 15 each week, and it must be at least 150, so $35 + 15w \geq 150$.

16 Choice A Functions

$f(5) = 5(25) - 15 + 5 = 125 - 15 + 5 = 115$.

17 Choice B Exponential functions

Doubling every 6 hours means the number of doublings is $t/6$, so the population is 800 times 2 to the power $t/6$.

18 Choice C Linear functions

The slope is $(4 - 0)/(4 - 2) = 2$. Using (2, 0), $0 = 2(2) + b$ gives $b = -4$.

19 Choice D Percent change

The increase is 1,800, and dividing by the original 12,000 gives 0.15, which is 15%. Dividing by the new value would give a smaller percent.

20 Choice A Right triangles

$7^2 + 24^2 = 625$, so the hypotenuse is $\sqrt{625} = 25$.

21 20 Percent change

The increase is 4 dollars, and 4 divided by the original 20 is 0.2, which is 20 percent.

22 6 Ratios and rates

The car travels 48 miles per gallon, so 288 miles needs $288 / 48 = 6$ gallons.

23 396 Volume

The volume is $\pi r^2 h = \pi(36)(11) = 396\pi$, so $k = 396$.

24 12 Linear equations

Expanding gives $3x - 12 = 6x - 48$. Collecting terms gives $-3x = -36$, so $x = 12$.

25 23 Systems of equations

Adding $x + y = 34$ and $x - y = 12$ gives $2x = 46$, so the larger number is 23.

26 63 Area

The area of a triangle is half the base times the height: $(1/2)(18)(7) = 63$.

27 11 Quadratics

The equation factors as $(x - 11)(x + 6) = 0$, so the solutions are 11 and -6. The positive one is 11.

Answer explanations

SAT Practice Test 3, Math, Module 2

Questions 1 to 14

1 **Choice B** **Volume**

The volume is $\pi r^2 h = \pi(36)(7) = 252\pi$.

2 **Choice A** **Probability**

45 students travel that way and 26 of them are in Grade 10, so the probability is 26/45. The fraction with 106 on the bottom uses every student.

3 **Choice D** **Scatterplots**

Substitute x = 5: 9(5) + 44 = 45 + 44 = 89.

4 **Choice C** **Functions**

f(2) = 4(4) − 12 + 6 = 16 − 12 + 6 = 10.

5 **Choice C** **Statistics**

The first 6 scores total 360, and adding 81 gives 441. Divided by 7, the mean is 63.

6 **Choice D** **Linear equations**

Subtract x from both sides: 4x + 6 = 22. Then 4x = 16, so x = 4.

7 **Choice B** **Percentages**

35% of 240 is 0.35 times 240, which is 84.

8 **Choice A** **Circles**

Arc length is the radius times the central angle in radians: 15 × π/4 = 15/4π.

9 **Choice D** **Exponential functions**

A year is 12 months, so the value is multiplied by 0.7^(12/6) = 0.7^2 = 0.49 each year. That is a decrease of 1 − 0.49, or 51%.

10 **Choice B** **Circles in the plane**

The center of circle A is (4, −4). Shifting it 3 units right and 2 units up moves the center to (7, −2), and the radius is unchanged, so the equation is (x − 7)2 + (y + 2)2 = 36.

11 **Choice A** **Exponential equations**

Write 4 as 2^2, so the right side is 2^(2x − 2). Equal bases give x + 1 = 2x − 2, so x = 3.

12 **Choice C** **Quadratics**

Completing the square: $x^2 - 12x + 27 = (x - 6)^2 - 9$. The smallest value of the square is 0, so the minimum of f is −9.

13 **Choice A** **Systems of equations**

A system has no solution when the lines are parallel but not identical. The second equation is 3 times the left side of the first with a different constant, so a must equal 6/3 = 2.

14 **Choice C** **Absolute value**

The inequality means x is within 3 of 3, so $0 \le x \le 6$. That range has 7 integers, counting both ends.

Answer explanations

SAT Practice Test 3, Math, Module 2

Questions 15 to 27

15 **Choice B** Equivalent expressions

$(4x + 3)^2 = 16x^2 + 24x + 9$, and $(x - 1)^2 = x^2 - 2x + 1$. Subtracting the second from the first gives $15x^2 + 26x + 8$.

16 **Choice D** Ratios and rates

The pumps fill 1/6 and 1/3 of the tank each hour, together 1/2 of it, so the time is 2 hours.

17 **Choice B** Statistics

Multiplying by 2 multiplies the mean and the standard deviation by 2; adding 8 moves the mean by 8 but does not change the spread. The mean of A is 5.6, so the mean of B is 19.2, which is 13.6 greater. The standard deviation of B is 2 times that of A.

18 **Choice C** Equivalent expressions

The numerator factors as $(x - 7)(x - 2)$. Cancelling $x - 7$ leaves $x - 2$.

19 **Choice A** Functions

$g(3) = 10$, so $f(g(3)) = f(10) = 25$. Also $f(3) = 11$, so $g(f(3)) = g(11) = 122$. The difference is $25 - 122 = -97$.

20 **Choice D** Percentages

50 is 30 more than 20, and $30 / 20 = 1.5$, so $p = 150$.

21 **5** Linear equations

Expanding gives $4x - 12 = 8x - 32$. Collecting terms gives $-4x = -20$, so $x = 5$.

22 **-1** Quadratics

For $ax^2 + bx + c = 0$ the solutions add to $-b/a = -(2)/2 = -1$.

23 **10** Quadratics

The maximum is at $t = -b/(2a) = 4/2 = 2$. Then $h(2) = -1(4) + 8 + 6 = 10$.

24 **5** Circles in the plane

Complete the square: $(x + 4)^2 + (y + 3)^2 = 0 + 16 + 9 = 25$. The radius is $\sqrt{25} = 5$.

25 **34** Similar triangles

The scale factor is $DE / AB = 10 / 5 = 2$. The perimeter of ABC is 17, so the perimeter of DEF is $2 \times 17 = 34$.

26 **8** Quadratics

Exactly one real solution means the discriminant is zero: $b^2 - 4(16) = 0$, so $b^2 = 64$ and $b = 8$ (taking the positive value).

27 **-1** Systems with nonlinear equations

Setting the expressions equal gives $x^2 - 4x + (3 - k) = 0$. One solution means the discriminant is 0: $16 - 4(3 - k) = 0$, so $k = -1$.
